Artificial Intelligence

Chapter 1

Outline

- ♢ Course overview
- ♢ What is AI?
- ♢ A brief history
- ♢ The state of the art

Administrivia

Class home page: `http://inst.eecs.berkeley.edu/~cs188`
for lecture notes, assignments, exams, grading, office hours, etc.
and **academic dishonesty policy** (DON'T CHEAT!!!)

Assignment 0 (lisp refresher) due 9/8
account forms from 727 Soda.

Book: Russell & Norvig Artificial Intelligence: A Modern Approach 2^{nd} Ed.
See syllabus: Chapter 1 for today's material, Chapter 2 for Thursday.

Code: new AIMA2e version posted locally (see class page)
Lisp/emacs/AIMA tutorial:
Online, or in person 10-12 and 3.30-4.30 on Fri 9/2, 273 Soda
Discussion section this week: Lisp refreshment

Prerequisites: CS 61A, and Math55/CS70

Sections 103 and 104 are primarily intended for non-CS majors

Course overview

- ♢ intelligent agents
- ♢ search and game-playing
- ♢ logical systems
- ♢ planning systems

- ♢ uncertainty—probability and decision theory
- ♢ learning

- ♢ language
- ♢ perception
- ♢ robotics
- ♢ philosophical issues

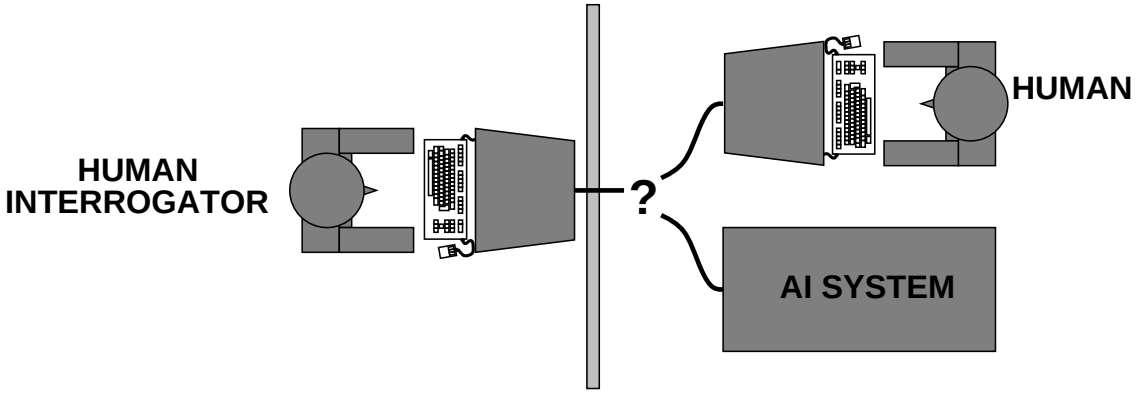
What is AI?

Systems that think like humans	**Systems that think rationally**
Systems that act like humans	**Systems that act rationally**

Acting humanly: The Turing test

Turing (1950) "Computing machinery and intelligence":

- "Can machines think?" $\longrightarrow$ "Can machines behave intelligently?"
- Operational test for intelligent behavior: the Imitation Game



- Predicted that by 2000, a machine might have a 30% chance of fooling a lay person for 5 minutes
- Anticipated all major arguments against AI in following 50 years
- Suggested major components of AI: knowledge, reasoning, language understanding, learning

Problem: Turing test is not **reproducible**, **constructive**, or amenable to **mathematical analysis**

Thinking humanly: Cognitive Science

1960s "cognitive revolution": information-processing psychology replaced prevailing orthodoxy of behaviorism

Requires scientific theories of internal activities of the brain

– What level of abstraction? "Knowledge" or "circuits"?

– How to validate? Requires

1) running human subjects (top-down) or 2) brain-stabbing (bottom-up)

Cognitive science is to AI as ornithology is to aerodynamics
(Drew McDermott, original attribution unknown)

Both approaches (roughly, Cognitive Science and Cognitive Neuroscience) are now distinct from AI

Both share with AI the following characteristic:

the available theories do not explain (or engender) anything resembling human-level general intelligence

Hence, all three fields share one principal direction!

Thinking rationally: Laws of Thought

Normative (or prescriptive) rather than descriptive

Aristotle: what are correct arguments/thought processes?

Several Greek schools developed various forms of logic:
notation and **rules of derivation** for thoughts;
may or may not have proceeded to the idea of mechanization

Direct line through mathematics and philosophy to modern AI

Problems:
1) Not all intelligent behavior is mediated by logical deliberation
2) What is the purpose of thinking? What thoughts **should** I have
out of all the thoughts (logical or otherwise) that I **could** have?

Acting rationally

Rational behavior: doing the right thing

The right thing: that which is expected to maximize goal achievement, given the available information

Doesn't necessarily involve thinking—e.g., blinking reflex—but thinking should be in the service of rational action

Aristotle (Nicomachean Ethics):

> **Every art and every inquiry, and similarly every action and pursuit, is thought to aim at some good**

Rational agents

An agent is an entity that perceives and acts

This course is about designing rational agents

Abstractly, an agent is a function from percept histories to actions:

$$f : \mathcal{P}^* \rightarrow \mathcal{A}$$

For any given class of environments and tasks, we seek the agent (or class of agents) with the best performance

Caveat: **computational limitations make perfect rationality unachievable**

$\rightarrow$ design best program for given machine resources

AI prehistory

Philosophy	logic, methods of reasoning
	mind as physical system
	foundations of learning, language, rationality
Mathematics	formal representation and proof
	algorithms, computation, (un)decidability, (in)tractability
	probability
Psychology	adaptation
	phenomena of perception and motor control
	experimental techniques (psychophysics, etc.)
Economics	formal theory of rational decisions
Linguistics	knowledge representation
	grammar
Neuroscience	plastic physical substrate for mental activity
Control theory	homeostatic systems, stability
	simple optimal agent designs

Potted history of AI

1943	McCulloch & Pitts: Boolean circuit model of brain
1950	Turing's "Computing Machinery and Intelligence"
1952–69	Look, Ma, no hands!
1950s	Early AI programs, including Samuel's checkers program, Newell & Simon's Logic Theorist, Gelernter's Geometry Engine
1956	Dartmouth meeting: "Artificial Intelligence" adopted
1965	Robinson's complete algorithm for logical reasoning
1966–74	AI discovers computational complexity Neural network research almost disappears
1969–79	Early development of knowledge-based systems
1980–88	Expert systems industry booms
1988–93	Expert systems industry busts: "AI Winter"
1985–95	Neural networks return to popularity
1988–	Resurgence of probability; general increase in technical depth "Nouvelle AI": ALife, GAs, soft computing
1995–	Agents, agents, everywhere . . .
2003–	Human-level AI back on the agenda

State of the art

Which of the following can be done at present?

♢ Play a decent game of table tennis

State of the art

Which of the following can be done at present?

- ♢ Play a decent game of table tennis
- ♢ Drive safely along a curving mountain road

State of the art

Which of the following can be done at present?

- ♢ Play a decent game of table tennis
- ♢ Drive safely along a curving mountain road
- ♢ Drive safely along Telegraph Avenue

State of the art

Which of the following can be done at present?

- ♢ Play a decent game of table tennis
- ♢ Drive safely along a curving mountain road
- ♢ Drive safely along Telegraph Avenue
- ♢ Buy a week's worth of groceries on the web

State of the art

Which of the following can be done at present?

- ♢ Play a decent game of table tennis
- ♢ Drive safely along a curving mountain road
- ♢ Drive safely along Telegraph Avenue
- ♢ Buy a week's worth of groceries on the web
- ♢ Buy a week's worth of groceries at Berkeley Bowl

State of the art

Which of the following can be done at present?

- ♢ Play a decent game of table tennis
- ♢ Drive safely along a curving mountain road
- ♢ Drive safely along Telegraph Avenue
- ♢ Buy a week's worth of groceries on the web
- ♢ Buy a week's worth of groceries at Berkeley Bowl
- ♢ Play a decent game of bridge

State of the art

Which of the following can be done at present?

- ♢ Play a decent game of table tennis
- ♢ Drive safely along a curving mountain road
- ♢ Drive safely along Telegraph Avenue
- ♢ Buy a week's worth of groceries on the web
- ♢ Buy a week's worth of groceries at Berkeley Bowl
- ♢ Play a decent game of bridge
- ♢ Discover and prove a new mathematical theorem

State of the art

Which of the following can be done at present?

- ♢ Play a decent game of table tennis
- ♢ Drive safely along a curving mountain road
- ♢ Drive safely along Telegraph Avenue
- ♢ Buy a week's worth of groceries on the web
- ♢ Buy a week's worth of groceries at Berkeley Bowl
- ♢ Play a decent game of bridge
- ♢ Discover and prove a new mathematical theorem
- ♢ Design and execute a research program in molecular biology

State of the art

Which of the following can be done at present?

- ♢ Play a decent game of table tennis
- ♢ Drive safely along a curving mountain road
- ♢ Drive safely along Telegraph Avenue
- ♢ Buy a week's worth of groceries on the web
- ♢ Buy a week's worth of groceries at Berkeley Bowl
- ♢ Play a decent game of bridge
- ♢ Discover and prove a new mathematical theorem
- ♢ Design and execute a research program in molecular biology
- ♢ Write an intentionally funny story

State of the art

Which of the following can be done at present?

- ♢ Unload any dishwasher and put everything away

Unintentionally funny stories

One day Joe Bear was hungry. He asked his friend Irving Bird where some honey was. Irving told him there was a beehive in the oak tree. Joe threatened to hit Irving if he didn't tell him where some honey was. The End.

Once upon a time there was a dishonest fox and a vain crow. One day the crow was sitting in his tree, holding a piece of cheese in his mouth. He noticed that he was holding the piece of cheese. He became hungry, and swallowed the cheese. The fox walked over to the crow. The End.

etc.

Hard questions

Will machines surpass human intelligence? Should they?

What will we do with superintelligent machines?

Do such machines have conscious existence? Rights?

Should we replace the human race with superhuman machines?

Can human minds exist indefinitely within machines?
